## **Biomineralization - Wikipedia**

Biomineralization, also written biomineralisation, is the process by which living organisms produce minerals, often to harden or stiffen existing tissues. Such tissues are called mineralized tissues. It is an extremely widespread phenomenon; all six taxonomic kingdoms contain members that are able to form minerals, and over 60 different minerals have been identified in organisms.

## **Importance of Biodiversity – Concepts of Biology**

Figure 1: This tropical lowland rainforest in Madagascar is an example of a high biodiversity habitat. This particular location is protected within a national forest, yet only 10

## Biology Protists Section Review Answer Key.pdf

percent of the original coastal lowland forest remains, and research suggests half the original biodiversity has been lost.
