Volume of a Rectangular Prism. The volume of a rectangular prism is the number of cubes it is made from. To find the number of cubes, we need to multiply the length by the width by the height. So Volume = length x width x height or $l \times w \times h$. We could also multiply the area of the base (which is the length x width) by the height.

How to Calculate the Volume | What? Calculating, Examples

We can count the cubes although it is quicker to take the length, width, and height and use multiplication. The rectangular prism above has a volume of 48 cubic units. The volume of a rectangular prism is = length x width x height. Examples of calculating the area of a rectangle. We need to do two multiplications to work out the volume.
