

The Manufacture Of Medical And Health Products By Transgenic Plants

Fine chemical - Wikipedia

Fine chemicals are complex, single, pure chemical substances, produced in limited quantities in multipurpose plants by multistep batch chemical or biotechnological processes. They are described by exacting specifications, used for further processing within the chemical industry and sold for more than \$10/kg (see the comparison of fine chemicals, commodities and specialties).

Environmental Risk - an overview | ScienceDirect Topics

As more products and by-products are developed using biotechnologies, the potential for environmental exposure has increased. Potential sources of biotechnological risk include direct and/or indirect releases to the environment from the manufacture and processing of biochemicals generated (e.g., proteins) as well the release of the modified ...

4 Current Bioprocess Technology, Products, and ...

Bioprocessing products and services used to control or remediate toxic wastes. This chapter reviews the status of bioprocessing for manufacture of products in categories that are relevant for the next 10 years. Much of the relevant background is derived from an Office of Technology Assessment report *Biotechnology in a Global Economy* (OTA, 1991).

Cocaine - Wikipedia

Cocaine (from French: cocaïne, from Spanish: coca, ultimately from Quechua: kúka) is a tropane alkaloid and stimulant drug obtained primarily from the leaves of two coca species, *Erythroxylum coca* and *Erythroxylum novogranatense*. It is most commonly used as a recreational drug and euphoriant. After extraction from coca leaves, cocaine may be snorted, heated until sublimated and then inhaled ...

Genetically Modified Corn— Environmental Benefits and Risks

Oct 13, 2003 · Increased weediness could be conveyed, however, if the plants are more fit or able to out-compete other crop species by producing more seed, by dispersing pollen or seed further, or by growing more vigorously in a specific environment. In fact, transgenic sunflowers can produce over 50% more seed

than traditional varieties.
